Thanks Alison!

Do you have POC for the POTW? In this case, we are concerned about the MEW regional TCE shallow groundwater contamination infiltrating into the sewer lines along Fairchild Drive. If we can confirm, then we can require the MEW parties to further investigate and determine potential impacts.

Thanks for your support.

Alana

Alana-

I created a "Gateway" file within the Drop Box. There are sub files within that file that include a storm water folder and SS videos. One storm water video labeled as "D3-42 to D3-41" has 4 videos within it and the relevant files are 2-4.

As a follow-up to your question concerning water quality sampling data of the sanitary sewer, I checked with our Environmental safety folks we do not conduct the sampling. Any discharge monitoring "pump and treat" is done is specific to the site and not for the receiving water of the sewer main. Any water quality monitoring data that is collected is submitted to the respective regularly agencies and to EPA.

The Treatment Plant may have measurements but it would be at a location where the collection system discharges to the regional system.

Alison
